1 Abstract

On this week's episode, we were introduced to Doug Feith, who has a fascinating background in astrobiology.

Dr. Feith is a professor of bioengineering at the University of California Santa Barbara and a member of the Virginia Polytechnic Institute and State University Board of Trustees. He and his team have developed a gene therapy drug called GEN-003 for a rare type of inherited retinal disease.

Dr. Feith explains how our genes play an important role in how oocytes develop into healthy eyes and how our bodies interact with their environment.
