1 Abstract

The ability of molecular investigators to accurately diagnose cancer in the same head-to-head world as in the blood is in jeopardy because current diagnostic tests are biased toward blood glucose due to the error rate of sample sampling. In new research led by Dr. Brian Whitney, of Massachusetts General Hospital, researchers demonstrated a new molecular mechanism of SSR128129E that inhibits FGF signaling. Dr. Whitney and colleagues identified a new molecule on the surface of tumors called SSR128129E
